

Monarch Butterfly Conservation Project

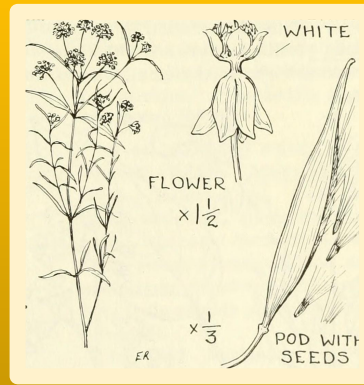

By Belle Zeroogian

**As of 2020, the monarch butterfly
is listed as an endangered species
by the U.S fish and wildlife service**

**Their extinction would lead
to a disruption in the food
chain, endangering many
other animal species**

**Why are they endangered,
and what is causing the
population of monarch
butterflies to decrease each
year?**

The problem is, pesticides kill milkweed, a plant required in the process of producing monarch larvae. And as the milkweed population dies off, so will the monarch butterflies.

The main issue is pesticides, specifically companies that pride themselves on eliminating unwanted weeds from laws across the country.

What can you do to prevent the monarch butterfly extinction?

Using environmentally friendly pesticides and gardening services is a step we can all take to ensure a happy future for monarch butterflies, but planting a few milkweed plants in your garden couldn't hurt either :)

THANK YOU
